Transferology™

Transfer tools built for Advisors, Recruiters, Transfer Specialists, and Administrators

Membership in the Transferology™ network gives institutions of higher education a nation-wide presence for recruiting students and a venue for publicizing transfer articulation information. Transferology assists advisors, students, and parents in making educated decisions when transferring credit.

Proactively evaluate transfer scenarios, enable students to self-serve, and reduce call and email volume.

Transfer Equivalencies

Quickly and easily view a comprehensive list of all the equivalencies a participating school has defined, with the ability to control the transferring to and from fields. Filters allow you to narrow results by location, military, online, and department.

Replacement Courses

Advise students on courses they can take elsewhere that will transfer back to your institution. This reverse lookup makes it simple to see where else a student can take a course to satisfy requirements to complete their degree at your school.

Transfer Pathways

Save time, streamline your advising workflow, and help students map their community college to four-year path using Course Bundles and Transfer Pathways. Create and reference common or unique transfer scenarios for students with Course Bundles. With highly useful, pre-approved avenues to a degree, students can explore Transfer Pathways to take courses that are not only transferable (taking advantage of partnership agreements), but also applicable to a real educational goal.

Reports and Statistics

Measure and manage your transfer-friendliness with our reports and statistics. The Popular Courses and Unknown Equivalencies reports allow you to see what courses students are interested in, so you can proactively make equivalencies and boost your placement (match percentage) in the results list. Other powerful reports allow you to monitor traffic, requests for information, profile views, program views, replacement courses, and results clicks.

More Powerful Together
Advanced Integration Features

Evaluate Faster with TES®

Users designated as TES Evaluators may create evaluation tasks from courses appearing in Course Bundles and Unknown Equivalencies, streamlining the transfer process based on actual student interest!

Equivalency guides created in TES may also be automatically imported into Transferology for display.

View Programs with uAchieve®

Show students how their courses may apply (what-if scenarios) toward various degree programs they may be considering. This feature is available for schools that have the uAchieve Degree Audit. This way, students can see a complete audit before enrolling.
